

Nahavähi kliiniline diagnoosimine

Ave Vahlberg

2013

ITKH, OÜ Vahlberg & Pild

Esmashaigestumus/ 100 000 el .kohta (2008)

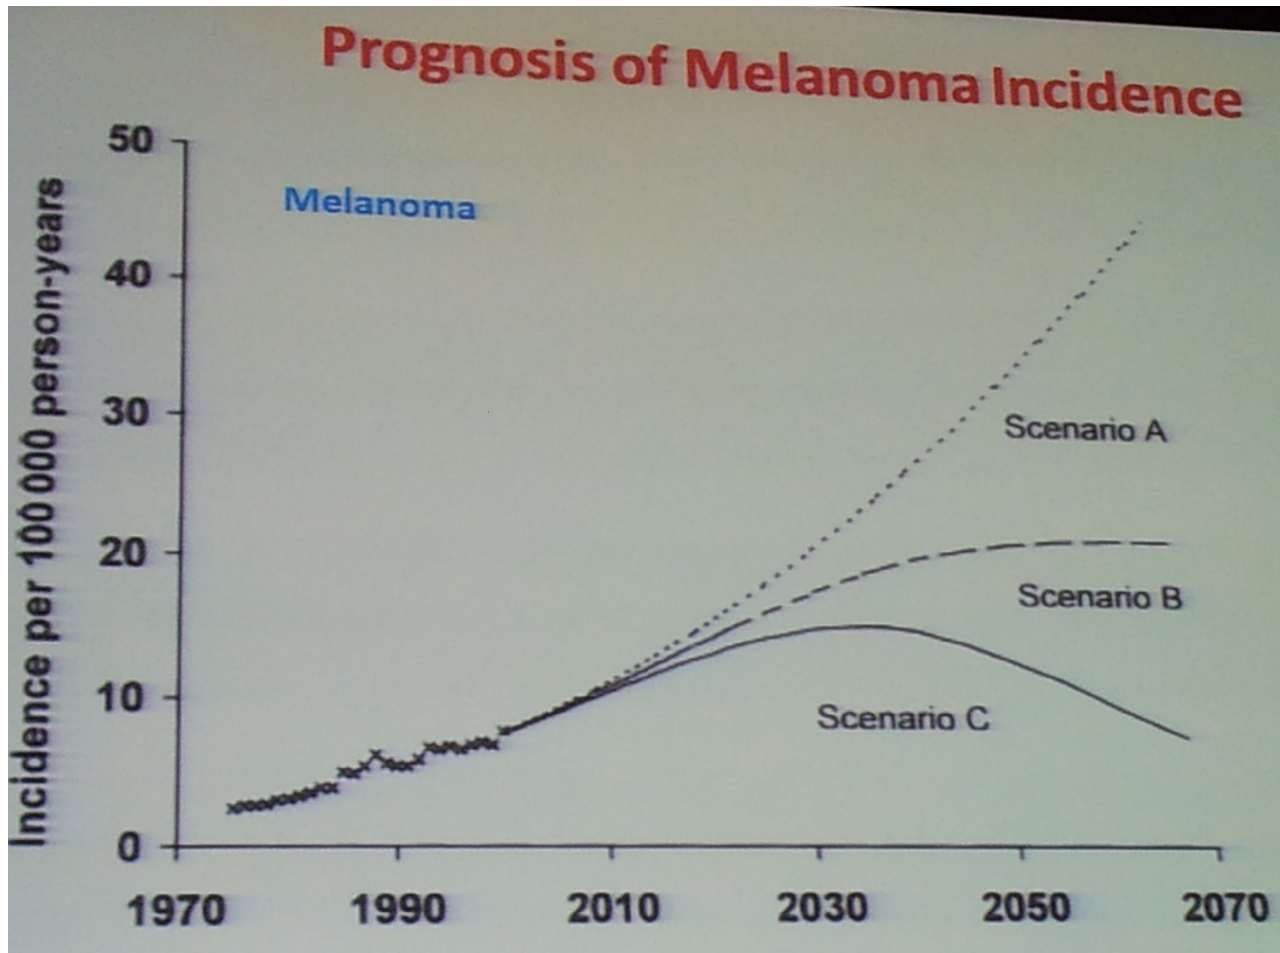

- Mehed C43 - 10,7
- Naised C43 - 13,4

- Mehed C44 - 47,3
- Naised C44 - 72,7

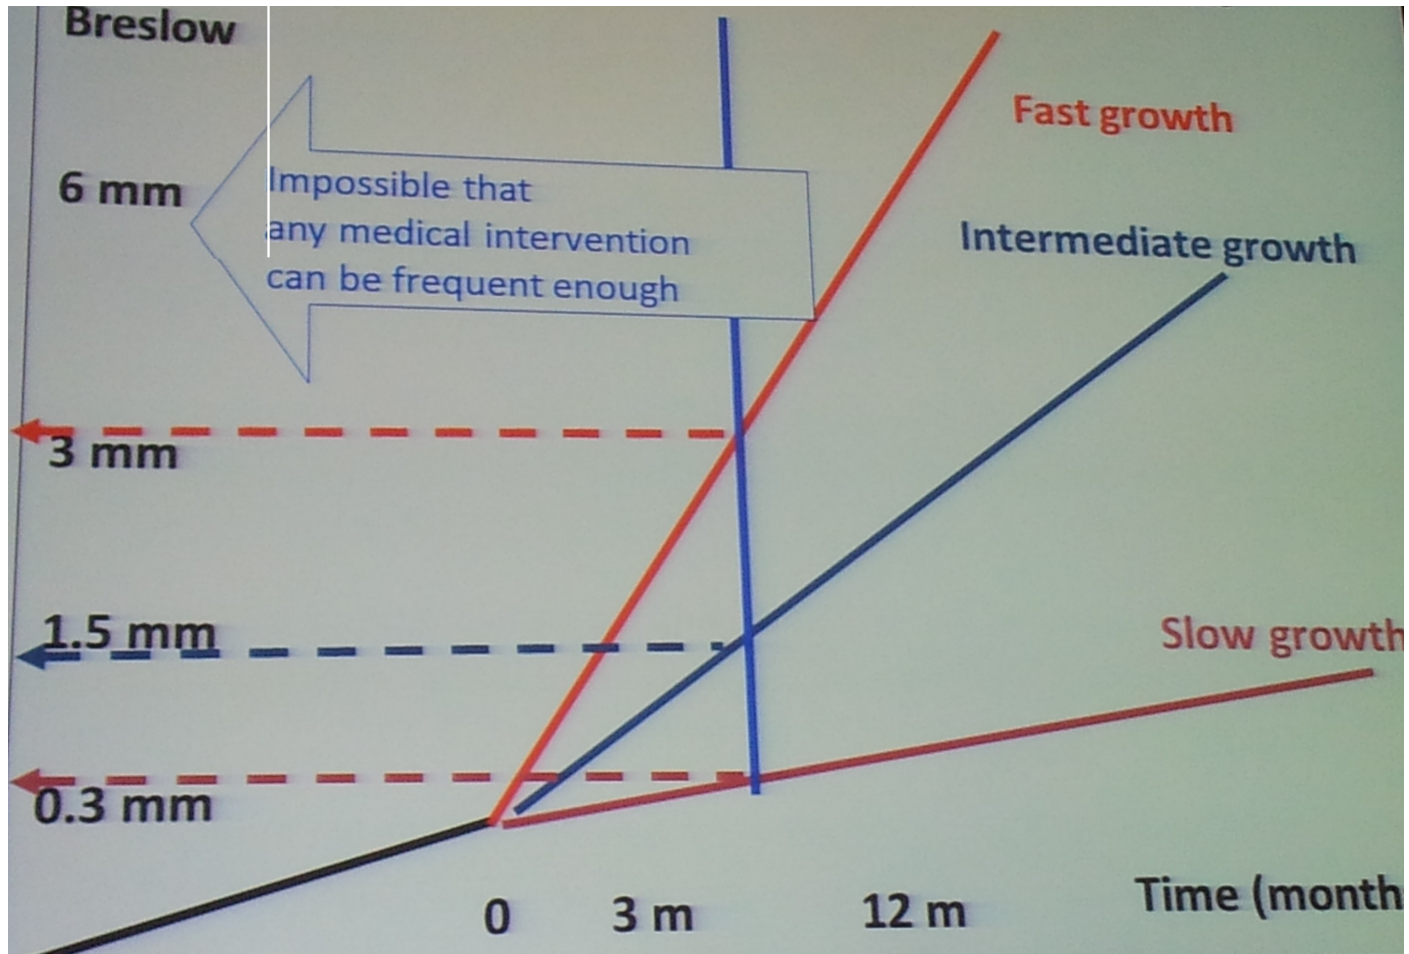

Suremuskordaja/ 100 000 el. kohta (2011)

- Mehed C43 - 5,18
- Naised C43 - 3,88

stsenariumid

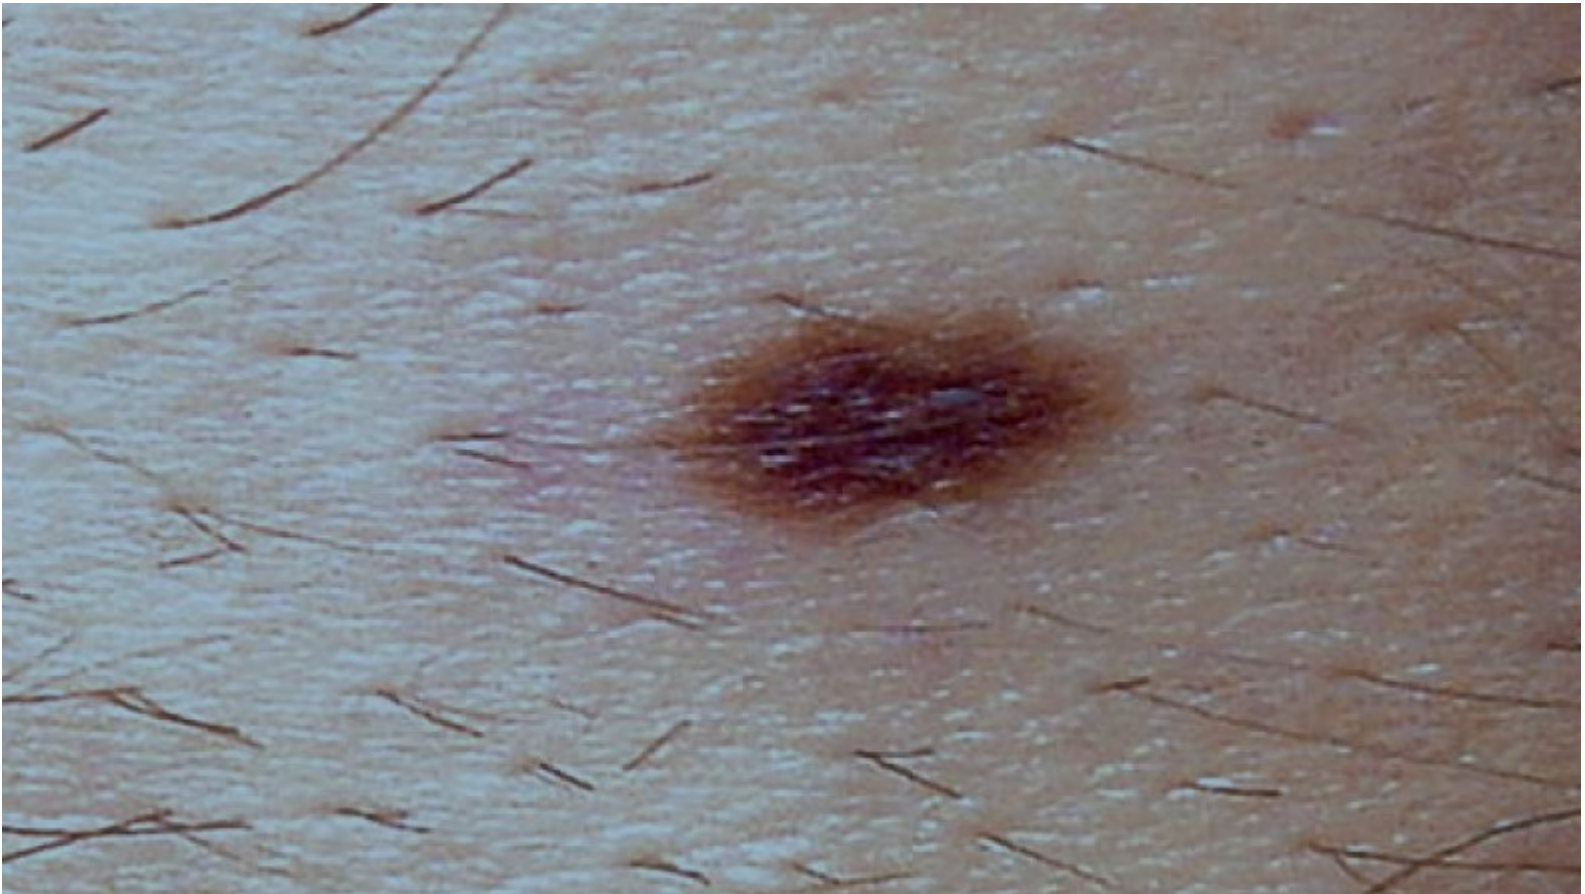

stsenaariumid

Skriiningkampaaniate kontseptsioonimuutus

- Realistlik - Inimestele, kes „ ei hooli „ - peavad aduma , et tegu melanoomiga
- Muster/Pilt , mida korduvalt näinud, tunneb ära automaatselt
- Võime leida ebatüüpiline objekt
- Võime tunda ära muutus stabiilses situatsioonis/ pildis / mustris

In situ melanoom

Pindleviv melanoom

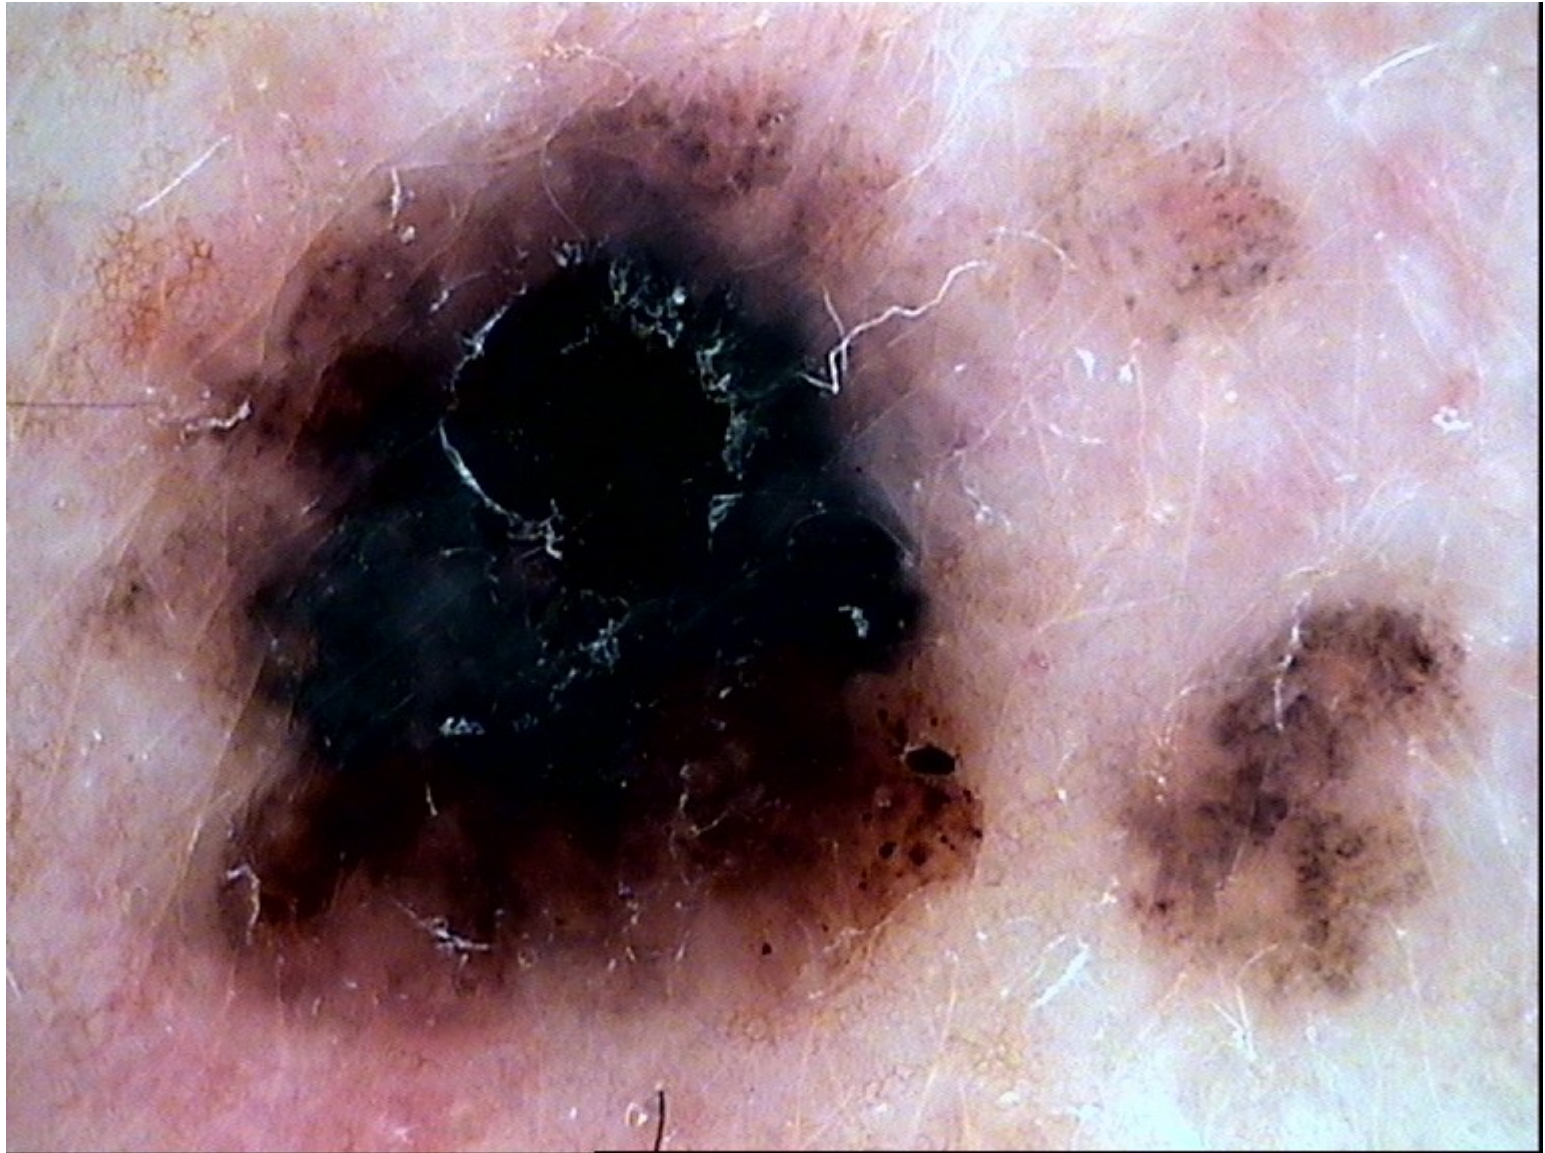

Pindleviv melanoom

Pindleviv melanoom

Akraalne melanoom

Nodulaarne melanoom

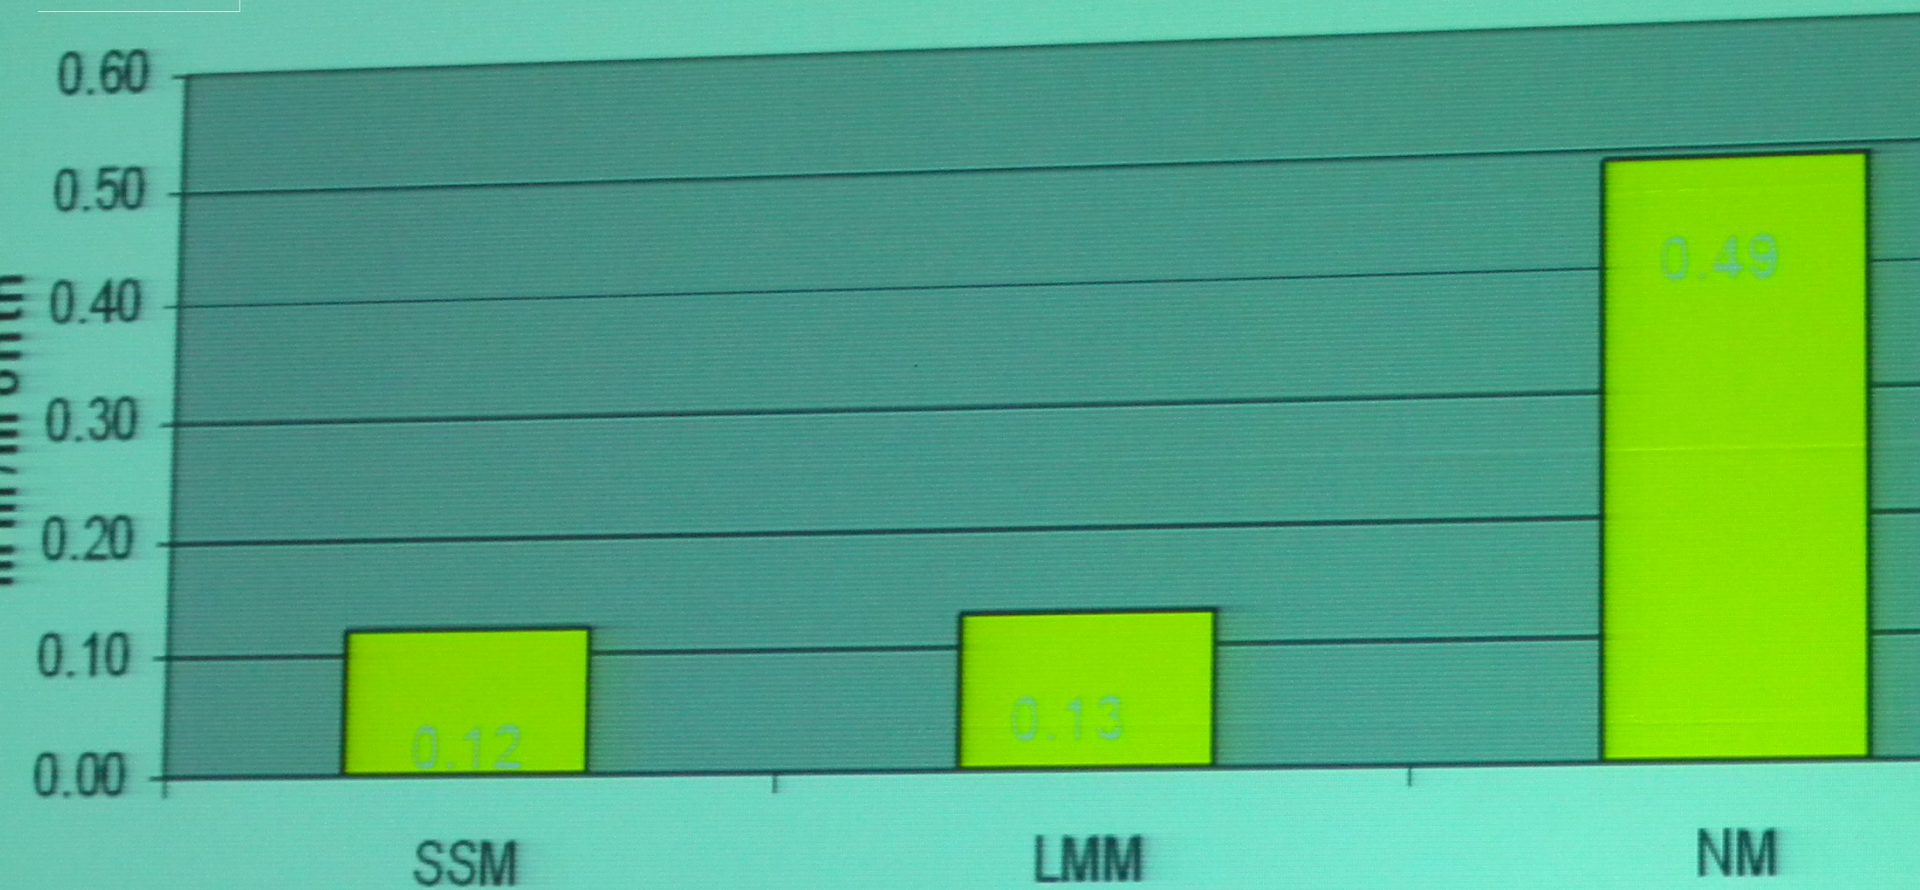

- NM- 7% melanoomidest
- NM suremus 45 % kogu melanoomi suremusest

- 80 % sümmeetrilised
- 78,1 % - üks värv
- 60,7 % - amelanootiline

- NM haiged keskmiselt 10 a. vanemad
- (59 vs 49)
- NM haigeil vähem neevusi
- NM rohkelt solaarkeratoose

- Aladiagnoositud
- Diagnoositakse kui BCC, SCC
- NM- patsient leiab 61%
- SSM 49 %

Nodular melanomas grow faster than other types: Median melanoma growth in mm per month
