

Mr. Gösta Tidell

IMTEC

Glunten

Uppsala

Dear Sir!

Thank you very much for your interest to our medical technology and for the idea to help us.

The project you presented is fantastically good. Is it possible to perform?

By this project the level of diagnosing and treatment in our hospital will improve. By connecting the CT scanner in our hospital to CT in Uppsala University Hospital via Tele-x satellite there will open the new possibilities in training our doctors and students. Possible then even our doctors may be attended to practical work in your hospital.

Surely this project is very expensive as we need then a new modern whole body CT scanner. Unfortunately our government cannot find the money to support this project. We can hope only to Swedish government and to you realising this project.

We will be very thankful if your negotiations with Swedish government will succeed. We are sure, it will be real help to our health care system as well as to Estonian society at all.

We are ready to do whatever possible to help you to realize your ideas.

Please give us to know what we can do!

Sincerely your Urmo Kõöbi

head doctor of Tartu University Hospital

Väino Sinisalu

the president of Estonian Medical Association
